**OSYRIS MEDICAL U.S.A. CHANGES LASER – ASSISTED LIPOLYSIS
IN THE U.S. UPON IMMEDIATE DEBUT**

- Osyris Medical U.S.A. Increases Accessibility of Lipotherme as well as introduces breakthrough device LipoControl –

DALLAS, TX – Osyris Medical USA, an extension of Osyris Medical, based in Lille, France, is establishing their new presence in the American market with the increased international accessibility of a leading laser-assisted lipolysis unit Lipotherme™ as well as with the introduction of LipoControl, a breakthrough electronic mapping device for laser-assisted lipolysis that provides safer treatments and optimizes outcomes.

Lipotherme is a leading laser-assisted lipolysis unit offered through Osyris Medical internationally, and now through Osyris Medical U.S.A. Lipotherme is a safe, effective, minimally invasive procedure that uses a laser to break down and remove unwanted fat in targeted body zones. In addition to removing unwanted fat, Lipotherme's thermal effect causes the skin to contract, resulting in firmer, smoother skin that further enhances your body shaping goals. Lipotherme has the capability of also performing vein removal for varicose veins, and blue leg veins.

LipoControl is Osyris Medical's latest breakthrough and features a tracking device that constantly monitors the position of the hand piece and the amount of energy being delivered to the treatment area. LipoControl enables the surgeon to actually see in real time exactly where they are working and what they have accomplished. Each stroke of the cannula appears in color on the screen as the surgeon moves the cannula back and forth. Color is used to display the heat level applied accurately and efficiently. If the doctor stops moving the cannula for any reason the heated tip shuts off automatically. This reduces risk and enhances the safety of this procedure. The addition of LipoControl - the very first unit of its kind – actually enables plastic

surgeons and dermatologists to “see” inside the patient’s body while performing lipolysis procedures.

LIPOCONTROL 2-2-2

“We are thrilled to introduce LipoControl to our list of expert cosmetic surgeons and dermatologists,” said Pascall Servell, Director of Clinical Education for Osyris Medical U.S.A. “Physicians who work with this versatile unit are excited by the ability to ‘see’ inside their patients body in real time. This new device has the potential to greatly advance the field of laser-assisted lipolysis.”

LipoControl promises less bruising and swelling along with more precise results and opens the doors to expanding the uses of laser-assisted lipolysis, allowing surgeons to experiment with more delicate areas of the face and body, widening the scope of use and expanding patient satisfaction and better results.

###

About Osyris Medical U.S.A.

Osyris Medical U.S.A. is the American extension of the international leading medical laser company, Osyris Medical. Based in Dallas, TX, Osyris Medical U.S.A. provides the world's leading medical aesthetic devices focused on current and emerging technologies in skin tightening, skin rejuvenation, body contouring that are scientifically proven, clinically validated and have the highest consumer demand.
