**OSYRIS MEDICAL U.S.A. EXHIBITS LIPO THERME™, POPULAR
LASER-ASSISTED LIPOLYSIS DEVICE AT 67th ANNUAL MEETING
OF AMERICAN ACADEMY OF DERMATOLOGY**

- American extension of the international leading medical laser company, Osyris Medical, will feature Lipotherme unit at AAD 2009 in San Francisco -

DALLAS, TEXAS, March 7, 2009 – Osyris Medical U.S.A., the American arm of Osyris Medical, the leading French manufacturer and marketer of precision laser equipment for medical applications, will feature its innovative laser-assisted lipolysis unit, Lipotherme™, at the American Academy of Dermatology’s 2009 Annual Meeting at San Francisco’s Moscone Center, March 7-9.

Since its introduction in the U.S., Lipotherme has captured a significant share of the hotly contested, laser-assisted lipolysis market. Lipotherme is an advanced 980 nm continuous wave diode laser that can be adjusted from 1 watt to 25 watts of power. It will be on display at Booth 2036.

“We are delighted that Lipotherme has become a favored choice of so many dermatologists and plastic surgeons,” said Jack Savage, CEO of Osyris Medical U.S.A. “Physicians who see this versatile unit are quickly won over by its outstanding track record, proven performance, and how it delivers on skin retraction and safety.”

Mr. Savage noted that with its versatile power range, Lipotherme has more than sufficient energy to make body sculpting procedures much less strenuous for physicians than comparable and higher-priced devices. He said Lipotherme is also ideal for treating the chin, back, abdomen, arms, inner thighs and upper knees.

In addition, the company is previewing LipoControl at the Osyris booth. LipoControl is the new advanced laser-assisted lipolysis system that offers maximum control of energy delivery. This onscreen electronic mapping system shows distribution of heat/energy in real time. It

also offers automatic adjustment of laser power to compensate for movement of the cannula as to avoid hot spots and ensure optimized and even treatments.

LIPOTHERME AT AAD 2-2-2

Noted New York physician, Dr. David Goldberg, a Lipotherme user, commenting on the efficacy of the Lipotherme unit, Dr. Goldberg said, “After using competitive laser lipolysis devices for many years, I was introduced to a new product on the market called Lipotherme. After performing the procedure, I found Lipotherme to be a powerful and easy to use device due to its microcannula and 25 W of energy output. The ease of the procedure also provided my patients less downtime and remarkable results.”
